

Once we enable Multifactor Authentication (MFA) for the application the user will sign on as shown below:

Sign In

Username

Password

Remember me

[Need help signing in?](#)

The user will then be presented with the below box to elect their choice of MFA. Multiple MFA options can be elected. If electing more than one, they have to be added one at a time. Select your choice of MFA by clicking on the corresponding “Setup” button for the MFA option:

HANYS
Always There for Healthcare

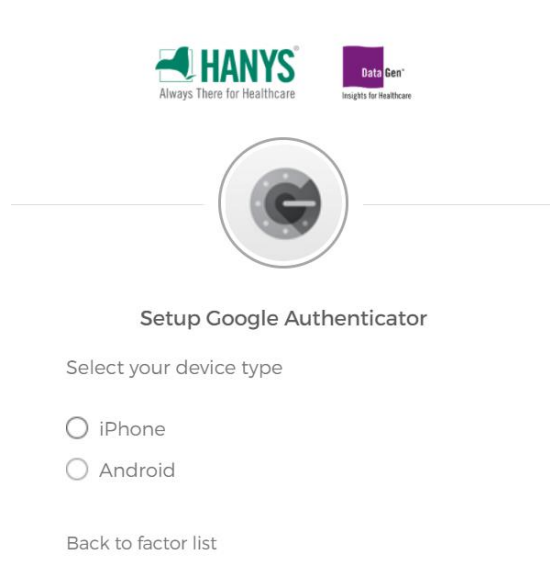

Data Gen
Insights for Healthcare

Set up multifactor authentication

Your company requires multifactor authentication to add an additional layer of security when signing in to your Okta account

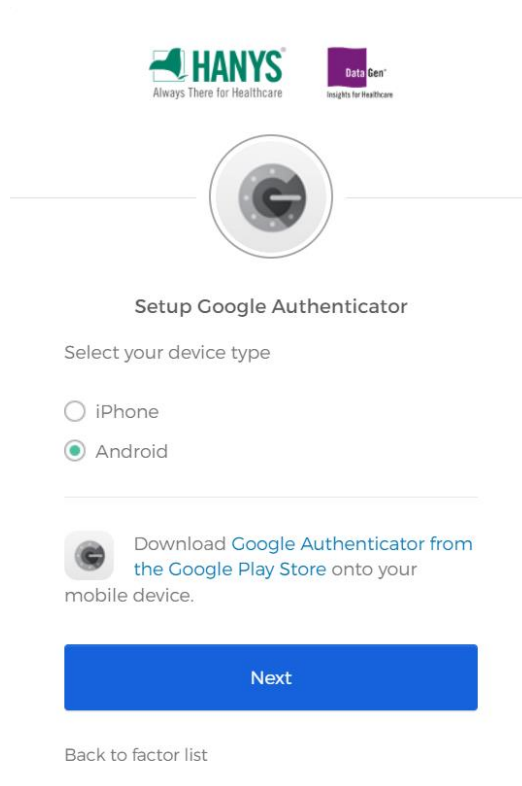

- Okta Verify**
Use a push notification sent to the mobile app.
[Setup](#)
- Google Authenticator**
Enter single-use code from the mobile app.
[Setup](#)
- SMS Authentication**
Enter a single-use code sent to your mobile phone.
[Setup](#)
- Email Authentication**
Enter a verification code sent to your email.
[Setup](#)

For this example, Google Authenticator was elected. Now the user will be asked for their type of device. Select your device type now:

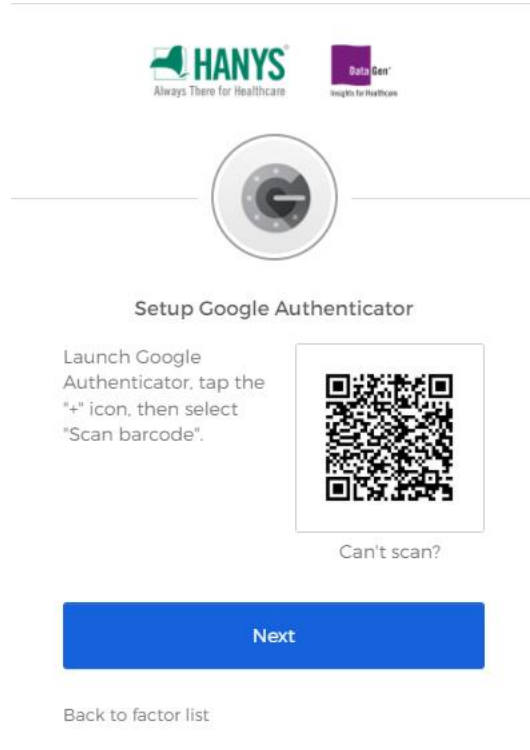

The message appears to instruct the user to download the elected MFA application before continuing as shown below.

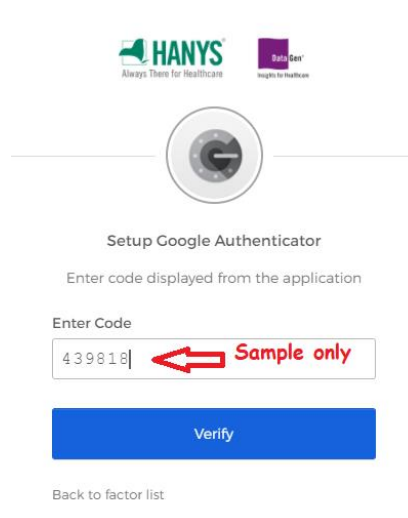

Click Next to proceed:

Next the user will be presented with the following window. Please follow the on screen instructions for your elected MFA application and then click Next once you have added the new MFA option to your device:

Now the user will need to add the MFA code on their computer in Okta from the newly added MFA application on their device and then click on the Verify button:

This will bring you back to add another MFA option or the user can select Finish and they will be routed to the website:

HANYS **Multi-Factor**
Always There for Healthcare authentication

Set up multifactor authentication

You can configure any additional optional factor or click finish

Enrolled factors

-  Google Authenticator 

Additional optional factors

-  **Okta Verify**
Use a push notification sent to the mobile app.
-  **SMS Authentication**
Enter a single-use code sent to your mobile phone.
-  **Email Authentication**
Enter a verification code sent to your email.
